#### printf() with arguments

```
1  #include <stdio.h>
2
3  int main()
54 {
5    printf("a=%d; b=%d; c=%d", 1, 2, 3);
6    return 0;
7 }
```

```
1
      .LC0:
  2
               .string "a=%d; b=%d; c=%d"
  3
      main:
  4
              push
                       rbp
6 5
                       rbp, rsp
  6
                       ecx, 3
              mov
  7
               mov
                       edx, 2
  8
              mov
                       esi, 1
  9
                       edi, OFFSET FLAT:.LC0
              mov
11].0
                       eax, 0
              mov
 11
              call
                       printf
 12
               mov
                       eax, 0
 13
               pop
                       rbp
 14
               ret
 15
```

## scanf()

```
1  #include <stdio.h>
2
3  int main()
64 {
65    int x;
6    scanf ("%d", &x);
7    return 0;
8 }
```

```
1
    .LC0:
 2
            .string "%d"
 3
    main:
 4
                   rbp
            push
6 5
            mov
                   rbp, rsp
 6
            sub
                 rsp, 16
 7
            lea rax, [rbp-4]
 8
            mov rsi, rax
 9
                 edi, OFFSET FLAT:.LC0
            mov
            mov eax, 0
11].0
            call __isoc99_scanf
 11
 12
            moν
                   eax, 0
 13
            leave
 14
            ret
```

### **Passed arguments**

```
#include <stdio.h>
 1
 2
    int f(int a, int b, int c)
 3
 4
    {
 5
        return a*b+c;
 6
    }
 7
 8
    int main()
10 9
        printf ("%d\n", f(1, 2, 3));
10
11
        return 0;
12
    }
```

```
1
      f:
  2
                       rbp
               push
  3
                       rbp, rsp

               moν
 28
               pop
                       rbp
 29
               ret
```

#### **Pointers**

```
#include <stdio.h>
 2
 3
    int main()
 4
     {
6 5
      /* Pointer p */
 6
        int *p;
 7
 8
        int var = 5;
 9
11].0
      /* Assigning the address of var to p */
        p = \&var;
 11
 12
13
        return 0;
    }
 14
```

```
1
     main:
 2
             push
                     rbp
43
                     rbp, rsp
             mov
                     DWORD PTR [rbp-12], 5
4
             mov
6 5
                     rax, [rbp-12]
             lea
                     QWORD PTR [rbp-8], rax
  6
             moν
  7
                     eax, 0
             mov
  8
                     rbp
             pop
  9
             ret
 10
```

### **Double pointers**

```
#include <stdio.h>
 1
 2
 3
     int main()
5 4
     {
 5
         int var = 3;
 6
 7
         //pointer for var
 8
         int *ptr2;
 9
 10
         //double pointer for ptr2
 11
         int **ptr1;
 12
         //storing address of var in ptr2
 13
         ptr2 = &var;
 14
 15
         //storing address of ptr2 in ptr1
1116
 17
         ptr1 = &ptr2;
 18
 19
         return 0;
     }
 20
```

```
1
      main:
 2
                      rbp
              push
                      rbp, rsp
4 3
              mov
 4
                     DWORD PTR [rbp-12], 3
              mov
  5
              lea
                      rax, [rbp-12]
                     QWORD PTR [rbp-24], rax
 6
              mov
8 7
                     rax, [rbp-24]
              lea
 8
                     QWORD PTR [rbp-8], rax
              mov
 9
                      eax, 0
              mov
 10
                      rbp
              pop
 11
              ret
 12
```

## **Arrays**

```
1  #include <stdio.h>
2
3  int main()
54 {
5    int arr[5] = {1, 2, 3, 4,5};
6    return 0;
7 }
```

```
1
      main:
  2
                      rbp
              push
43
                      rbp, rsp
              mov
 4
                     DWORD PTR [rbp-32], 1
              mov
 5
                     DWORD PTR [rbp-28], 2
              mov
                     DWORD PTR [rbp-24], 3
 6
              mov
8 7
                     DWORD PTR [rbp-20], 4
              mov
                     DWORD PTR [rbp-16], 5
 8
              moν
 9
                     eax, 0
              moν
 10
                      rbp
              pop
 11
              ret
```

## For loop

```
#include <stdio.h>
 1
 2
 3
    int main()
54
    {
 5
        int i;
 6
        for (i=1; i<=4; i++)
 7
 8
       printf("%d\n", i);
10 9
 10
 11
 12
        return 0;
 13
    }
```

```
1
      .LC0:
  2
              .string "%d\n"
  3
      main:
  4
              push
                       rbp
  5
                       rbp, rsp
              mov
  6
              sub
                       rsp, 16
8 7
              mov
                      DWORD PTR [rbp-4], 1
 8
                       .L2
